

Chair connector for parallel tubes under seat – retractable

SCSC-001

Retractable chair connector, attached to parallel tubes below the seat. This connector allows a chair in the middle of a row to be replaced without moving the other chairs. The arms lock securely in the retracted position, remaining hidden when not in use. A smart solution for conference and concert venues where many chairs need to be safely linked together. The joining brackets can be customised with features such as a logo, unique colour, length, and more.

Information on testing linked chairs can be found in EN 14703:2007.

Note: 1 piece = One connector and two position clips. A small hole must be drilled in the tube for the positioning clips.
